Title :	Carbon Footprint – Product Category Rules (PCR) for Cork Stoppers		
Scope :	The cork stoppers covered by the scope of this document are cork stoppers as defined in ISO 633, Cork — Vocabulary, including natural cork stoppers, agglomerated cork stoppers, micro-agglomerated cork stoppers, multi-piece cork stoppers, 1+1 cork stoppers, and any other stoppers defined as cork stoppers. This document is applicable to the calculation of the carbon footprint (CFP) of cork stoppers from cork oak forest management through to the end-of-life stage of the stopper. This document establishes the principles, requirements and guidelines for the Product Category Rules (PCR) for cork stoppers within the framework of a Type III environmental declaration or a carbon footprint communication programme based on life cycle assessment (LCA) in accordance with ISO 14067. It also provides guidance on how to address and integrate additional environmental information, whether or not it is based on an LCA, in a consistent and scientifically sound manner in accordance with ISO 14025.

National Ref :	EVS 901-2:2016/prA1		
Title :	Road construction. Part 2: Bituminous binders		
Scope :	This standard specifies paving grade bitumen, polymer modified bitumen and cationic bituminous emulsion classes, which on the basis of experience and research are suitable for use in construction and maintenance of roads, airfields and other paved areas in Estonia. Specified classes of bituminous binders do not preclude the use of other binders pursuant to EN standards if their suitability for designated uses are proven. There is not sufficient experience in present time in Estonia in the use of hard paving grade bitumens, multigrade bitumens, cutback and fluxed bituminous binders. This standard shall be updated when sufficient experience is gathered. Until then all choices are to be made based on EN standards. This Estonian standard specifies the basis for quality agreements between suppliers and customers. The bituminous binder classes in Tables 1 to 3, 5 to 6, 8, 9 and 11 allows to choose the most suitable binder specification considering local climate, conditions of use and the accumulated experience.

National Ref :
Title : Water quality – Determination of the chemical oxygen demand
Scope : This document specifies a method for the determination of the chemical oxygen demand (COD) in waters. The method is applicable to water samples having the COD value between 30 mg/l and 700 mg/l. Concentration of chloride shall not exceed 1 000 mg/l. Water samples

fulfilling the conditions are analyzed directly. If the COD value exceeds 700 mg/l, water sample shall be diluted. Organic compounds are mostly oxidized under the specified reaction conditions. Nitrogenous and heterocyclic compounds are exceptions. Volatile hydrophobic substances volatilize and therefore are not oxidized. Organic compounds that are oxidized simultaneously under the specified reaction conditions are for example: bromide and iodide, nitrite, some sulphur compounds, some metal compounds. On the contrary, some compounds can react as oxidants under the specified reaction conditions. This circumstance has to be taken into account during interpretation of results.
